

Q.1

Ans: Actual parameters are the parameters that appear in the function call. Formal parameters are the parameters that appear in function declarations.

(ii) The call by value method of passing arguments to a function copies the actual value of an argument into the formal parameter of the function. In this case, changes made to the parameters inside the function have no effect on the argument.

Ans ② `#include <stdio.h>`

```
int fact(int n)
{
```

```
    int f = 1;
```

```
    while (n != 1)
```

```
    {
```

```
        n--;
```

```
        f = f * n;
```

```
    }
```

```
    return f;
```

```
}
```

```
int main()
```

```
{
```

```
    double s;
```

```
    for (int i = 1; i <= 5; i++)
```

```
    {
```

```

s += fact(i)/i;
}

```

```

printf("the summation of series till 5 = %.1f", s);
return 0;
}

```

Output →

the summation of series till 5 = 34.000000

Ans (3) →

Value of 'n' inside function = 25

Modified value of x = 15

Ans (4) →

```

#include <stdio.h>

```

```

int find_factorial(int n)

```

```

{

```

```

    if (n == 0)

```

```

        return(1);

```

```

    else

```

```

        return( n * find_factorial(n-1));

```

```

}

```

```

int main()

```

```

{

```

```

    int num, fact;

```

```

    printf("Enter number of pins: ");

```

```

    scanf("%d", &num);

```

```

    fact = find_factorial(num);

```

```

    printf("In possible ways to arrange %d pins are %d", num, fact);

```

```

    return 0;
}

```

Ans 5) #include <stdio.h>

int main()

{

int a, r, ar[100], i = 0;

printf("enter a decimal number to get its binary\n");

scanf("%d", &a);

while(a > 0)

{

r = a % 2;

ar[i] = r;

a = a / 2;

i++;

}

i--;

printf("binary conversion is \n");

for(i; i >= 0; i--)

{

printf("%d", ar[i]);

}

}

Output →

enter a decimal number to get its binary
20

binary conversion is
10100

Ans Q1 #include <stdio.h>

```
void swap(int a, int b)
{
```

```
    int t;
```

```
    t = a;
```

```
    a = b;
```

```
    b = t;
```

```
    printf("\n The values of two numbers after  
    swapping : a = %d , b = %d", a, b);
}
```

```
int main()
```

```
{
```

```
    int a, b;
```

```
    printf("Enter two numbers to swap:");
```

```
    scanf("%d %d", &a, &b);
```

```
    printf("\n The values of two numbers before swap:  
    a = %d , b = %d", a, b);
```

```
    swap(a, b);
```

```
    return 0;
```

Output →

Enter two numbers to swap: 4 7

The values of two numbers before swap: a = 4, b = 7

The values of two numbers after swapping: a = 7, b = 4

Ans 7

```
#include <stdio.h>
```

```
int count (int n)
```

```
{ if (n==1)
```

```
{
```

```
    return n;
```

```
}
```

```
else
```

```
{
```

```
    return n + count (n-1);
```

```
}
```

```
}
```

```
int main()
```

```
{
```

```
    int n;
```

```
    printf ("Enter the value of n \n");
```

```
    scanf ("%d", &n);
```

```
    int s = count (n);
```

```
    printf ("Sum of stars = %d ", s);
```

```
    return 0;
```

```
}
```

Ans 8

```
#include <stdio.h>
```

```
int armstrong (int n)
```

```
{
```

```
    int d, s=0, t=n;
```

```
    while (t != 0)
```

```
{
```

```
        d = t % 10;
```

```
        s = s * d * d * d;
```

```
        t = t / 10;
```

```
int perfect (int n)
```

```
{
```

```
    int d, s, t;
```

```
    s=0;
```

```
    t=n;
```

```
    for(int x=1; x<t; x++)
```

```
    {
```

```
        if (t%x==0)
```

```
        {
```

```
            s+=x;
```

```
        }
```

```
    }
```

```
    return (n==s);
```

```
}
```

```
int main()
```

```
{
```

```
    int n;
```

```
    printf("Enter any number: ");
```

```
    scanf("%d", &n);
```

```
    if (armstrong(n))
```

```
    {
```

```
        if (perfect(n))
```

```
        printf("%d is Both Armstrong & Perfect No.", n);
```

```
    else
```

```
        printf("%d is an Armstrong Number but Not  
a perfect number", n);
```

```
    }
```

```
    else { if (perfect(n))
```

```
        printf("%d is not an armstrong but perfect No.", n);
```

```
    else
```

```
        printf("%d is an Armstrong but not a perfect no.", n);
```

```
    }  
    return 0;
```

Output →

Enter any Number: 153
153 is an Armstrong Number but Not a Perfect Num
